EURODUR® GMBH AN OVERVIEW

FAMILY BUSINESS WITH
YEARS OF EXPERIENCE
AND THE BEST ADVICE

Company founder Wolfgang Rott † (left) with
son & current CEO Matthias Rott.

OVER
35 YEARS
OF
QUALITY

EURODUR® GmbH develops, produces and sells highly wear-resistant specialised coatings (using surface-layer welding), assemblies and installations for national and international industrial and economic sectors. Upon request, this also includes assembly by our own specialists.

We promise to provide the best quality for our customers; and fulfil this with commitment. Not only when it comes to the consistently high standard of our products, but also our consulting expertise, experience and reliability. We are also committed to continuously improving our products and adapting them to our customers' ever-increasing requirements

Our customers' requirements are our primary goals! We can only win and maintain the trust and satisfaction of our customers with flawless products and services. By using flux-cored electrodes, our manufacturing process guarantees the highest coating quality time after time. This process is characterised by a constantly even distribution of hard carbides throughout the entire weld metal and an extremely low level of mixing with the actual base material. Armouring on specially developed EURODUR® welding machines means powerful, top welding technologies for high-quality, reliable protection against wear.

Planning & Development
Successful projects start with good planning!

Specialist sales team
This makes communication at eye level possible.

Welding & Coating
High-quality wear protection is our passion and core competency.

Forming / Edges
We always fulfil even unusual requests with the best quality.

Construction
Turnkey construction is no problem for us – quite the opposite.

Delivery
We will gladly deliver your products to you after prior consultation.

Assembly
Upon request and after consultation, we will assemble directly at your site.

OUR PRODUCTS IN USE

OUR PRODUCTS IN USE

Upon request, EURODUR® GmbH offers up to 14 standard analyses plus many more; these are carefully adapted to the individual applications and wear problems. The decisive factor for a fully developed protection system, however, is processing the selected analysis with regard to welding.

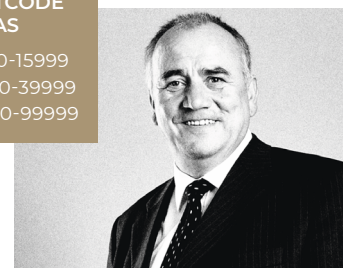

In recent years, EURODUR® GmbH has set standards in this field, which are regularly confirmed by independent institutes. The Technical University of Clausthal's Institute of Welding and Machining (ISAF) has compiled several reports regarding various

analyses of EURODUR® GmbH. In doing so, it creates a coating characterisation of our welding armouring with regard to weld metal, microstructure, carbide precipitation, mixing, hardness etc. By using flux-cored electrodes, our manufacturing process guarantees the highest coating quality time after time as well as a constantly even distribution of hard materials throughout the entire weld metal.
